

With the sun hour
on the sundial

here
3:30 PM
April 10th

How to get
the legal hour

here
5:43 PM

You need to make 3 corrections (See explanations over leaf)

$$3:30 + 2h. (1) + 12min. (2) + 1min. (3) = 5:43$$

- (1) add 1 hour in Winter or 2 hours in Summer, administrative decision
- (2) the longitude, we are not on Greenwich meridian
Plouha : 3° West add 12 min.
- (3) the Equation of time, the length of the day is not exactly 24h
add the value of the curve: on the 10th April, add 1 min.

EQUATION DU TEMPS MOYENNE (Rc+Re=EQ), an: 2005 Moyenne 4 ans Jull/Grég.
(Rc, réduction au centre en rouge, Re réduction à l'équateur en bleu.)
Colonnes les 01, 5, 11, 16, 21, 26 et premier jour du mois suivant, à midi.

But, wouldn't it be better to live with the sun ?

Longitude :

The sun «goes around» the earth in 24h, or 15° per hour. Legal hour in our time zone corresponds to sun passage at Greenwich meridian. So you must take into account the longitude difference:

Montreux-Château	7° 00' East	- 28 min.	Sun will arrive at Greenwich meridian later
Bruz	1° 45' West	+ 7 min.	Sun has already passed at Greenwich
Plouha	3° West	+ 12 min.	

And if you come from Italy, Germany or Holland, you gain one hour of sunlight in the evening !

Equation of Time:

The duration between 2 passages of the sun on the local meridian is not constant, due to 2 causes:

- the earth inclination on the ecliptic
- The elliptical mouvement of the earth around the sun

On a daily basis the differences are negligent on a sundial but they grow to a maximum of plus or minus 16 min. The equation of Time shows this difference in minutes depending on the day of the year.

Compared to the « true » hour which is noon when the sun is passing the meridian, you need to use the equation of time correction in order to get the « mean » hour where 2 consecutive noons are separated by a mean day of 24 hours exactly. This correction often appears as an 8, especially on meridians.

Examples (see the graph over leaf):

February 1 st	add 13 min.
August 5 th	add 6 min.
October 1 st	substract 10 min.

No modification on April 15th, June 14th, September 1st and December 25th (for Christmas presents)
